

CASE REPORT

Restoration Using Ecosite Elements for #10 Diastema

Case Presented By: Dr. Neville Hatfield

A 47-year-old female presented with a distal diastema on tooth #10. The patient wanted the space closed to match her chief concern of the diastema showing when she smiled.

I addressed her shade of natural dentition to B1 using the Vita classic shade guide (figs. 1, 2).

To complete the restoration, I used mainly Ecosite Elements Pure-Shade B1. A small amount of Ecosite Elements Layer-Shade EL was also used to achieve the correct enamel opacity.

The patient was pleased with the esthetic result! (figs. 3, 4)
